JAST Establishes Alliance to Provide Services for Life and Non-Life Insurance Companies

Japan System Techniques Co., Ltd. (JAST) has signed an alliance agreement with Adjust Co., Ltd. (Head Office: Shibuya-ku, Tokyo; President: Hiromasa Yokomizo) concerning joint activities involving the medical big data business. The objective of this alliance is to combine the knowledge and technologies of the two companies for the development of services that life and non-life insurers can use in their claim assessment, product development and healthy lifestyle promotion operations.

1. Summary of the Alliance

Since August 2010, JAST has been selling an automated electronic health insurance claims checking and analysis software called JMICS. JAST used its extensive and broad expertise involving ICT to create this innovative product for speedily and automatically processing the monthly invoices that health insurers receive from medical institutions. In April 2013, JAST started a big data business for health insurers. Centered on JMICS, the big data business has a larger range of solutions by incorporating health check-up information and other data from external sources, performing analysis and notification tasks, and providing other services.

The big data business meets the diverse needs of health insurers by using medical big data for every step from checking insurance claims to activities that help people to stay healthy. For example, sophisticated automated inspections of invoices sent to health insurers accompanied by statistical analysis ensure that the correct amounts are billed for medical procedures. Big data also makes it possible to analyze data spanning many years in order to provide advice to individuals on ways to prevent diseases or prevent a disease from becoming serious. The aim is to supply a total package of services through the comprehensive use of medical big data that enables health insurers to fulfill their mission of achieving a proper level of medical expenses and contributing to the health of policyholders.

JAST launched JMICS six years ago and currently provides this software to more than 100 insurance organizations and nine checking service providers. JMICS is now used to process more than 10 million health insurance invoices every month and this number is continuing to climb steadily.

Adjust is a specialist in the field of medical data. Established in 1982, the company develops IT systems, supplies application software, builds databases, performs data input and compilation tasks, and provides other products and services involving medical data. The ability to utilize the expertise of physicians in many fields for the development of products and provision of services is a key strength of the company. Activities also include involvement as a consultant with medical care consultations and the preparation of medical care appraisal forms. In addition, Adjust assists life and non-life insurance companies by helping organize and analyze databases for diseases and surgical procedures. Other activities are support for the secretariats of medical associations and the collection and analysis of research data.

This alliance will allow JAST and Adjust to share their expertise for checking insurance claim invoices from medical institutions, assisting with activities to help people stay healthy and supplying support services for the operations of health insurance providers. The companies will extend assistance for claim assessments, sales activities and the development of new products. To help policyholders lead a healthy life style, JAST and Adjust plan to offer a smartphone app. All these new services will closely reflect the needs of life and non-life insurance companies.
